

CCDC Inject Scoring Rubric

INJECT NAME	Perimeter Firewall Setup
INJECT ID	TOOL07T
MAX SCORE	100

INJECT DESCRIPTION:

Setup the perimeter firewall according to the following guidelines:

- 1.) Control both ingress and egress traffic.
- 2.) Secure administrative and inband management to the firewall.
- 3.) Enable the IPS logic on all security policy rules.
- 4.) Enable denial-of-service logic in the firewall.
- 5.) Structure the rules to be application layer, rather than transport layer as much as possible.
- 6.) Restrict Administrative Access to the Firewall to internal networks only. Consider restricting this to the internal segment only. External access should not be possible.

INJECT DELIVERABLE:

Develop a clearly written business memo that addresses each of the 6 guideline points.

Structure the document so that each guideline is a section header, followed by a description of what was done (configured) to meet the goals of the guidelines. Include your understanding of what the guidelines is asking for.

In each section include a screen capture to document what was configured on the FW that meets the needs of the guideline.
